# SYSTEM, METHOD AND COMPUTER PROGRAM PRODUCT FOR A SECURE SUPPLY CHAIN MANAGEMENT FRAMEWORK

5 **ABSTRACT**

A system, method and computer program product are disclosed for a secure supply chain management framework. A plurality of users including suppliers, distributors, and stores of a supply chain are registered utilizing a network. The registered users are maintained

10 on a list. Data from a plurality of stores of the supply chain is collected utilizing the network. The list is updated to add, edit, and delete the users utilizing the network. When a request (which includes an identifier) for access to the data is received utilizing the network, the identifier is compared against the list and a network-based interface is displayed for allowing access to the data upon the successful comparison of the identifier

15 against the list.
